It will also cover the ...

Key principles in outbreak investigation and management

Outbreak Investigation Team and plan drawit If an outbreak is suspected an Outbreak Control Team (OCT) should be convened to conduct the investigation with the following represented in the membership Consultant in Communicatie Disease Control CCDC Consultant in Health Protection (CHP) Environmental Health Officer (HO) Consultant Microbiologist or Virologist With consideration of Regional epidemiologist Mediapressofficer -infection control nurse -State veterinary service

Verify the diagnosis and confirm the outbre • Investigators should establish a case definition by characterizing cases by clinical signs and symptoms and epidemiologic information related to person, place, and time. Using the case definition, investigators can search for additional cases

4. Tabulate and orient data: time, place, pers! Information about possible cases should be organized in a line listing and summarized according to time, person, and place.

Take immediate control measures . If the source of the outbreak is apparent and still a potential threat to public health, appropriate control measures should be taken as quickly as possible. Examples of control measures are closing a restaurant, prohibiting swimming in a certain area, and enacting isolation and contact tracing, strategic management-command and control, prophylaxis

... e.g. Food based source **outbreak**, Case Control **Study**, .

Implement and evaluate control measures . Once the cause of the outbreak has been identified investigators should outbreak and prevent future outbreaks. These control measures are more determine if they are

effective. Examples of such measures are: recommending afferent food safety procedures in a restaurant, implementing better disinfection protocols at a local swimming pool, and establishing screening programs in local emergency rooms. Resistant organism on the ward, new emerging organisms etc
